

The Alexander Dubček University of Trenčín offers postdoctoral working positions in its research facility Joint Glass Centre of the IIC SAS, TnU AD, and FChPT STU located in Trenčín, Slovakia (www.ceksim.eu).

Work description:

Applied and fundamental research, and experimental development in the area of glass, advanced ceramic materials and other inorganic materials, with special attention paid to solution of tasks related directly to industrial production in the field.

Start of the contract: February 2014

Contract durations: 21 months

Salary: Based on a salary for university researchers and teachers with corresponding qualification, usual in Slovak republic.

Requirements:

- PhD or equivalent in materials science, materials chemistry, chemical sciences or physics.
- Ability to work independently. This includes ability to analyze given task, design the experimental plan, perform the required experiments, analyze the results and make proper conclusions including preparation of final report. Experiences in characterization of glasses, ceramics and other inorganic materials by different techniques are welcomed.
- Team spirit.
- Good command of English. No language certificate is required, but the ability to communicate in the language will be tested during the interview.
- No age limit, however due to the limits for postdoctoral positions only applicants up to 10 years after completing their thesis can be considered.

Documents required:

- Professional CV (Europass format preferred).
- Certificate of education (PhD diploma or equivalent).
- List of publications.
- Motivation letter.
